Future Oil Supply Uncertainty and Impacts on Transportation/Land Use Planning

Rex Burkholder
Metro Councilor
Portland, Oregon, USA
U.S.: Price at the pump jumps 10 cents

Retail prices for gasoline continued to climb, with the average price at the pump rising 10 cents to $2.78 a gallon.

International Economy / Oil

World's thirst for oil makes falling output worse

By Javier Blas
Published: March 15 2005 19:12 | Last updated: March 15 2005 19:12

Last year's surge in oil prices was driven by the biggest yearly increase in demand since 1976. But analysts say today's high prices are the result of strong demand on oil supply growth from non-Opec countries.

Bloomberg

Oil Rises Above $70 a Barrel in New York on Iran Supply Concern

April 17 (Bloomberg) -- Crude oil rose above $70 a barrel in New York for the first time since Hurricane Katrina on concern the dispute over Iran's nuclear program may disrupt shipments.

"The Iranian situation is getting no better and any combination of events could lead to a conflagration," said Michael Fitzpatrick, vice president of energy risk management at Fimat USA Inc. in New York. "China's GDP is growing at over 10 percent so demand for oil will stay strong."

CNN Presents Classroom:
We Were Warned: Tomorrow's Oil Crisis

CNN Student News -- Set your VCR to record the CNN Presents Classroom Edition: We Were Warned: Tomorrow's Oil Crisis when it airs commercial-free on Monday, April 3, 2006, from approximately 4:10-5:00 a.m. ET on CNN.

It is September 2009. A Category 5 hurricane roars through Houston, destroying oil refineries, drilling platforms and pipelines--the complex system that provides a quarter of our nation's daily fuel supply. Three days later, terrorists attack two key oil installations in Saudi Arabia, the world's largest supplier. In the days and weeks that follow, gasoline prices hit record highs, food prices soar as trucks cannot afford to make deliveries, and Americans begin to realize that their very way of life is in peril.
Different Approaches

- “Energy Security”
  “...[E]nergy is the albatross of U.S. national security...”

- “Energy Vulnerability”
  “Oil makes it possible to transport food to the totally non-self-sufficient megacities of the world.”
  –Daniel Yergin, *The Prize: The Epic Quest for Oil, Money, & Power.*

- “Peak Oil”
  “One thing is clear: the era of easy oil is over...”
  –From Chevron’s “Will You Join Us?” campaign, February 2006.
The factors of oil supply and demand are changing.

“'The days of inexpensive, convenient, abundant energy resources are quickly drawing to a close.'”

**Demand**
- Industrialization in the less-developed world

**Supply**
- The "easy oil" has been tapped
The Issue

- We are likely entering a period of increasingly frequent and large fluctuations in oil prices and supply.
  - Changing demand and supply factors
  - Instability in oil-producing regions
  - Inherent difficulties in forecasting oil production

“Oil Supply Uncertainty”

Energy Information Administration, United States.
“Annual Energy Outlook 2006.”
The Problem

Why is this a problem?

• **Essential input:**
  We are dependent on oil as a raw material.

• **Assumed input:**
  Systems assume stability in oil supplies and prices.

• **Non-interchangeable input** (short-term):
  Alternatives are still marginal.

  "Oil (and natural gas) are the essential components in the fertilizer on which world agriculture depends;
  “Oil makes it possible to transport food to the totally non-self-sufficient megacities of the world.
  “Oil also provides the plastics and chemicals that are the bricks and mortar of contemporary civilization…”
Mitigating Factors

- Oil Production System Resilience
- Economic System Resilience
- Alternatives will become more feasible

**HOWEVER...**

Mitigating factors are **price-driven**.
They will contribute to future outcomes in ways that may be different than long-range planning efforts that comprehensively consider **economic, environmental and social equity goals**.
“Peaking will result in dramatically higher oil prices, which will cause protracted economic hardship in the United States and the world...

“Timely, aggressive mitigation initiatives addressing both the supply and the demand sides of the issue will be required...

“Mitigation will require a minimum of a decade of intense, expensive effort...

“Intervention by governments will be required, because the economic and social implications of oil peaking would otherwise be chaotic.”

Need for a Response

A Risk Management Problem

We increasingly face the **potential for economic crisis** brought about by uncertainty in our supply of oil, but we are **unable to accurately predict** in what way that supply may be threatened and how severe that threat may be.

Although the resilience of the world economic system in general—and the oil production system in particular—may sufficiently mitigate a crisis with ample time, they **may not be able to respond adequately to sudden and severe periods of instability**.

Charter Responsibilities

Table 1. Metro Charter Responsibilities and Considerations for Oil Supply Uncertainty

<table>
<thead>
<tr>
<th>Charter Responsibility</th>
<th>Long-range Considerations</th>
<th>Short-term Considerations</th>
</tr>
</thead>
</table>
| land-use and transportation planning (primary responsibility) | ▪ transportation infrastructure  
▪ regional land use patterns  
▪ regional transportation patterns  
▪ transportation options (modal split)  
▪ implications for RTP | ▪ planning assumptions |
| solid waste disposal system                           | ▪ kinds and quantities of disposed materials                                               | ▪ fuel for vehicles (consider implications of possible fuel price instability in long-term contract negotiations with haulers) |
| regional facilities (Zoo, OCC, PCPA, Expo)            | ▪ OCC dependence on national travel trends                                                  | ▪ stable energy supplies for facilities                                                  |
| parks and open spaces                                 | ▪ land prices as affected by transportation patterns and modal split                       | ▪ fuel for vehicles                                                                      |
| planning and response coordination for natural disasters| ▪ emergency response planning (i.e., for a protracted energy shortage?)                    | ▪ emergency response planning (i.e., for a sudden energy shortage?)                       |
| development and marketing of data                     | ▪ scenario forecasting                                                                      | ▪ scenario forecasting                                                                   |
2. Approaching the issue

Metro’s primary responsibilities of land use and transportation planning are broken down into the following specific activities, each of which may relate to oil supply uncertainty in a different manner.

**Activities Analysis**

<table>
<thead>
<tr>
<th>Land Use</th>
<th>Transportation</th>
</tr>
</thead>
<tbody>
<tr>
<td>“New Look” at regional choices</td>
<td>Regional Transportation Plan</td>
</tr>
<tr>
<td>2040 Growth Concept</td>
<td>High-priority transportation projects</td>
</tr>
<tr>
<td>Urban growth boundary</td>
<td>Funding transportation projects (MTIP, TPP)</td>
</tr>
<tr>
<td>Guides and Plans for Building Livable Communities</td>
<td>Transportation research and modeling services</td>
</tr>
<tr>
<td>New area planning</td>
<td>Transit-oriented development implementation</td>
</tr>
<tr>
<td>Affordable housing</td>
<td>Transportation demand management</td>
</tr>
</tbody>
</table>
3. Addressing the issue

**Strategies and Suggestions**

- **Goal definition:** What exactly are our objectives?

- **Previous actions:** Past planning has provided for more mobility and land use options than most other major US cities. Ongoing 2040 Concept.

- **A vulnerability assessment** would help determine which of Metro’s activities within its specific Charter responsibilities may be most significantly impacted by oil supply (and price) instability.
3. Addressing the issue

Strategies and Suggestions

• Clear opportunities:
  – “New Look” study and evaluation process
    – MetroScope evaluation oil cost increase scenarios.
  – RTP update
    – Assess RTP for how it addresses the potential for oil supply uncertainty
    – Consider alternative projects, or processes for developing them.
    – Develop indicators to signal when assumptions need to be changed.
    – Determine how to minimize the risk in selecting and developing RTP projects.
  – Internal activities
    – “Ag/Urban Study”
    – Solid Waste and Recycling: hauling contracts, recycling markets, etc.
    – Enterprise operations (Zoo, OCC, etc.)
  – External forums
    – Economic Advisory Board, JPACT, TPAC, MPAC, MTAC, SWAC
